

Saman Ranjan Pradhan

📞 9330175007 ✉️ pradhansaman2017@gmail.com [in samanpradhan](#) [G SamanPradhan](#) [🌐 Portfolio](#)

Technical Skills

Languages: Python, JavaScript, TypeScript, C/C++

Backend Technologies: FastAPI, Django, NestJS, PostgreSQL, MongoDB, Celery, Websockets

Cloud & DevOps: AWS, Docker, CI/CD (Jenkins, CircleCI, ArgoCD), Nginx

Frontend Technologies: React.js, Next.js, HTML & CSS, Tailwind, Bootstrap

AI & ML Technologies: LLMs, Transformers, LangGraph, RAG, Vector DB, Fine-Tuning, Prompts, Agentic Workflows

Professional Experience

Truein (Yugstart Technologies)

November 2025 – Present

Software Engineer 2

Pune, India

- Architected **AI TimeGuard & AI Analytics** (NLP-to-SQL), enabling real-time insights across **200M+ records** over 5 joined tables; achieved **90%+ accuracy** through a four-layer hallucination defense, identity-isolated mapping for secure **AI-to-DB access**, and **optimized Jaro-Winkler similarity search**.
- Owned end-to-end development of a multi-platform **Agentic AI Chatbot** (Svelte, NestJS) across 6 production environments; scaled to **100K+ users** and 5K daily conversations, leveraging Agentic RAG for enterprise knowledge and user-specific data, with cost-optimized GPT-based STT/TTS, reducing support tickets by **25%**.
- Optimized legacy APIs by refactoring heavy queries, cutting redundant DB calls, and migrating the attendance table to a **horizontally partitioned architecture** – **55%+ faster queries** and **20% lower Aurora DB costs**.
- Served as **customer-facing integration engineer** for US, Australian, and MENA clients, running discovery calls to translate payroll processing pain points into integration requirements; drove ERP partnerships with **Sage Intacct, Procore, Trimble** and delivered **10+ HRMS/payroll integrations** end to end.
- Hardened cloud infrastructure for **SOC 2, GDPR, and ISO 27001 compliance**; remediated audit gaps using Scrut.io to strengthen security posture for B2B SaaS and maintain **99.9% uptime**.
- Working on building an internal **Full Stack AI Engineering Agent** powered by Claude Code with PRD & PM-aware planning, codebase intelligence, and an MCP-powered review & testing agent; delivered **45% of client-requirement features** in 3 iterations and accelerated delivery by **40%+**, earning **The Sprint Coder Award**.

EZ Lab

October 2024 – November 2025

Backend Developer

Gurugram, India

- Optimized inter-service communication between **8+ microservices** for **CAT tool TR42.ai** with **multi-level Celery task pipelines and event-driven messaging**, reducing response times and speeding up development.
- Redesigned the **translation inference pipeline** by building a scalable **centralised task-scheduling microservice** and migrating GPU workloads off EC2 to a cost-efficient platform, reducing **infra costs 47%**, increasing runtime **capacity 125%**, and doubling model deployment speed.
- Developed a **real-time chat microservice** for creating and disabling chat groups across multiple complex trigger points in business logic, delivering **1000+ msg/sec** via **WebSocket** and leveraging **Redis Pub/Sub, FastAPI**.
- Architected and deployed a **production-grade AI chatbot** using **LLMs** and proprietary datasets, orchestrating an **autonomous multi-agent LangGraph system** for real-time, stateful, auditable interactions.
- Built a centralized error handler using **Pub/Sub** with **CloudWatch logging & monitoring**, cutting debugging **time by 25%** and boosting incident response across the whole distributed system.

Sketchnote

December 2023 – April 2024

Software Developer

Remote

- Spearheaded the development of **advanced AI features**, including AI-driven task creation, AI analytics, and a PDF AI-Query bot, leveraging **LangChain, Vector DBs, similarity search, and ML algorithms**.
- Implemented enterprise-grade **Single Sign-On** via OKTA and Entra ID, enabling secure authentication and seamless enterprise onboarding while reducing IT overhead.

InQbator

August 2023 – November 2023

Full Stack Developer Intern

Remote

- As one of the **Founding Engineer**, designed and developed a **scalable backend architecture with full EC2 server setup, configuration, maintenance**, and integrated PhonePe payment gateway for seamless financial transactions.

Education

Vellore Institute of Technology (Online)

June 2027 (Expected)

Master of Computer Applications (MCA)

Vellore, India

University of Calcutta

August 2024

Bachelor of Science (Mathematics, Computer Science)

Kolkata, India

Masai School

November 2023

Full Stack Development (Certificate)

Remote
